***New Hampshire Drug Monitoring Initiative***  
**Situational Drug Awareness Alert - CARFENTANIL**

- Carfentanil has been found in New Hampshire for the first time and is **extremely potent**. On 4/25/2017 the medical examiner confirmed that carfentanil can be linked to three known deaths in New Hampshire. In addition there were three unrelated powder submissions to the state lab that tested positive for carfentanil. This provides a significant safety risk. This drug can be inhaled or absorbed when in the powder form.
- Carfentanil is a synthetic opioid approximately 10,000 times more potent than morphine and 100 times more potent than fentanyl.
- **Exercise Extreme Caution!**: Only properly trained and outfitted law enforcement professionals should handle any substance suspected to contain fentanyl or a fentanyl-related compound. If encountered, contact local authorities.
